

BritCham Indonesia

As one of the most active Chambers of Commerce in Indonesia for over forty years, the British Chamber of Commerce (BritCham) Indonesia has been facilitating and promoting trade and investment between the UK and Indonesia through a series of international trade missions, networking events and other business services.

In 2020 alone, the Business Centre unit within the Chamber successfully helped numerous British companies establish a presence in Indonesia. As a membership organisation, members receive exclusive benefits available only for members of BritCham Indonesia, such as B2B match-making, networking advocacy, access to UK-Indonesia

international trade events, and more.

As part of the recent COP26 activities in Glasgow, BritCham Indonesia and the Glasgow Chamber of Commerce co-hosted the Climate Chamber Mission. This virtual international trade and knowledge exchange event was attended by over 120 companies from 10 different countries. BritCham Indonesia recruited 10 domestic companies, represented by its delegates. As the only emerging country to be represented during the event, Indonesia led the Green Finance, Circular Economy (Human Capital), and Low Carbon/Renewables sectors.

In addition in Glasgow, BritCham introduced President Jokowi to British companies that BritCham is supporting

in connection with new or extended investments of around USD 9 billion.

Moving away from a business oriented approach, BritCham Indonesia has taken a holistic approach and established a business unit dedicated to bringing Indonesian nationals looking to pursue higher education to the UK; the Education Centre. Since its formation in late 2020, the BritCham Education Centre has organised over 50 virtual visits to more than 30 schools and universities across Indonesia, introducing the UK's high quality education through a panel of 14 British universities with employability ratings covering subject areas aligned with national goals and talent gaps bringing international employers and top Indonesian talent together.

The announcement of the Graduate Route by the UK government back in July allows international students to study and kick-start their career in the UK, thus leveraging their UK university degree. This initiative is attracting more interest for Indonesians to study at UK universities with an improved outlook of the best possible career opportunities.
